Deadline for manuscript submissions:

**closed (25 February 2024)**

### **Message from the Guest Editors**

Climate change and the human demand for forest products and ecological products create higher diversification requirements for the improvement of forest genetics. The breeding of new lines with multi-objective traits, such as rapid growth, high quality and high resistance, became the goal of present and future breeding. Chinese fir, an important native conifer tree species in China, made similar progress in breeding as the loblolly pine in America, Canadian spruce, and radial pine in New Zealand, and can be viewed as a typical tree species in tree genetics and breeding. We are calling for research works in the field of forest genetics that advance our understanding of the genetic control of tree traits of multi-functional value for Chinese fir, based on provenance, family or clone tests. We concern breeding population construction, seed orchards technology, and genetic diversity by using molecular marker-assisted breeding and the long-term genetic valuation of growth, material quality and stress resistance.

## Editors-in-Chief

### **Prof. Dr. Cate Macinnis-Ng**

Department of Biological Sciences, Faculty of Science, University of Auckland, Private Bag 92019, Auckland 1142, New Zealand

### **Prof. Dr. Giacomo Alessandro Gerosa**

Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

## Message from the Editorial Board

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

**Journal Rank:** JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
