Message from the Guest Editor

Forests are susceptible to natural or human-induced environmental changes. The dynamic movements of forests can be evaluated by using fingerprints found in soils/sediments, including organic products such as charcoal, pollen, and phytoliths, among others. All of these may indicate the occurrence, structure, and composition of forests. Also, forest dynamics can be evaluated via geomorphological, sedimentological, and multi-elemental chemistry analyses. Therefore, this Special Issue invites contributions that will provide significant insights into the use of fingerprints in assessing the development history of forests.

Potential topics include, but are not limited to:

- The role of geochemistry and sedimentology in the development of forests;
- Forest dynamics through time;
- Geochemical and sedimentological proxies to understand forest changes;
- Coastal forests and sea level changes.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
