30 June 2019

Message from the Guest Editors

With a growing global population, natural ecosystems that form the basis for our well-being are experiencing substantial challenges. Those challenges arise from an increasing demand for natural resources, such as timber, metals, oil or gas, and the related change processes that lead to an increase in natural disturbances. Meanwhile, demands regarding which values or services ecosystems should be managed for are increasing.

The idea of applying the principles of sustainable management to deal with such challenges originated from forestry over 300 hundred years ago and has since found its way into many disciplines. However, forests are still widely managed for a single product or service. The disciplines congregating under forest sciences are however in the unique position to showcase how to design and implement management activities that maintain productive and fully functional ecosystems.

For this Special Issue we encourage authors to submit studies from all fields, including experimental studies, monitoring approaches and modelling approaches aimed to promote strategies for socially, environmentally and economically successful multi-objective management of forest ecosystems.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex, GeoBase, Scopus and other databases.

CiteScore 2017 (Scopus): **2.31**, which equals rank 17/129 (Q1) in the 'Forestry' category.
