Message from the Guest Editor

Dear Colleagues,

Plant species diversity influences forest functions and the ecosystems services they provide. Natural disturbances play an important role in the creation and maintenance of forest diversity. However, global change is expected to alter disturbance regimes, creating novel conditions for forest ecosystems and their diversity. Thus, a deeper understanding of how forest diversity relates to different disturbances across regions is required to anticipate the response of forest diversity to altered disturbance regimes. Particularly, there is an urgent need to understand how the diversity of canopy as well as understory taxonomic and functional species responds to altered disturbance regimes, how disturbances influence above- and below-ground diversity linkages, and whether forest resilience to disturbances depends on diversity.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (Forestry) / CiteScore - Q1 (Forestry)
