Message from the Guest Editor

Dear Colleagues,

The incidence of abiotic and biotic stress in trees is increasing globally, leading to escalating concerns for forest protection, biodiversity, the provision of ecosystem services, biosecurity, economic production, and rural livelihoods. Tree declines are now present in most geographical regions in the world, extending from cold temperate to tropical forests. The objective of this Special Issue of *Forests* is to explore, using review articles and original research papers, the major abiotic and biotic stressors that have caused or incited significant tree decline and mortality in natural and planted forests over the past decade. It will also explore the recent drivers of change, global threats, risk management, and related topics.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex, GeoBase, Scopus and other databases.

CiteScore (2019 Scopus data): 2.7, which equals rank 41/140 in the 'Forestry' category.
