Message from the Guest Editors

Dear Colleagues,

Fine roots and mycorrhizas play a key role in processes that occur in soils. They act as conduits of carbon transfer, from plants to soils, and as agents of nutrient acquisition and transport. The morphology of fine roots and the type and species identity of mycorrhizas strongly affect carbon transfer and nutrient acquisition. In addition, other processes, such as the exudation of organic acids and other compounds, and the release of extracellular enzymes, link roots and mycorrhizas to soil processes. Moreover, roots and mycorrhizas can alter the decomposition of organic matter by, for example, the exudation of fresh organics, known as the 'priming effect'. Roots and mycorrhizas are also involved in soil formation, but are, in return, strongly influenced by soil properties. We encourage studies from all fields of root and mycorrhizal ecology, but particularly those which attempt to link the morphology of fine roots and the type and species identity of mycorrhizas to processes in soils.

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), Ei Compendex, GeoBase, Scopus and other databases.

CiteScore 2017 (Scopus): **2.31**, which equals rank 17/129 (Q1) in the 'Forestry' category.
