Message from the Guest Editor

Dear Colleagues,

Dendrochemistry, the measurement of inorganic elements in growth rings of trees followed by analysis and interpretation of changes in environmental chemistry through time, is both promising and challenging. For environmental situations where the abundance of an element or multiple elements has changed through time, direct monitoring of environmental chemistry might not extend very far back in time, if at all. Accordingly, estimating past element abundance of a site using trees is enticing. Even tree-ring records just 20 to 30 years in length, which would be considered short in traditional applications of dendrochronology, could be usefully long in dendrochemistry. Given that dendrochemistry truly works, it could be applicable in many environmental situations such as long-term changes in forest soil chemistry (e.g., N or P), abrupt changes in elements due to natural causes (e.g., ash deposits from explosive volcanic eruptions), or subtle increases in elements that might be harmful to human health (e.g., various metals) due to inadvertent contamination.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
