Message from the Guest Editors

Tree growth at the Alpine tree line is mainly restricted by temperature, and life forms are adapted to the cold environment. The presence of trees is strongly related to the micro-environment and also largely influenced by disturbances. Warming and decreasing duration of snow cover cause shifts in tree species composition and distribution patterns, densification of forests, and increasing plant growth. Nevertheless, responses in Alpine environment are often reported to be slow. Is the increase in changes rate so fast that species will become extinct? Are growth increases substantial, and can high elevation forest compensate for forest losses at lower elevations or are climate change rates too fast? What are the effects of shifting vegetation patterns on microclimate, soil processes and plant soil interaction (e.g. soil moisture, temperature soil carbon and nutrient cycling)?

The Special Issue aims at covering the state of the art in forest and tree growth response to climate change at the Alpine tree line, including shifts in vegetation patterns and plant soil interactions. Research articles and well-funded review articles on the topic are welcome.

Message from the Editorial Board

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access.

Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank: JCR - Q1 (*Forestry*) / CiteScore - Q1 (*Forestry*)
