

Special Issue

Monitoring and Control of Forest Pest and Disease

Message from the Guest Editor

As climatic changes and their effects on forest ecosystems have become more evident over recent years, forest monitoring has proven to be more relevant than ever. Climate change could alter the frequency and intensity of forest disturbances such as insect outbreaks, the occurrence of invasive species, and wildfires. Severe damage caused by invasive pests and pathogens can become devastating, covering vast areas of forests that pose a threat to economically important tree species. Remote sensing data and terrestrial observations could present information for the sizes of areas, deteriorated by biotic, abiotic, and fire damage, the health status of vegetation, and observation of the habitat in which pests and diseases are spreading out. The assessment of the harmful impact and spread of the most important insect pests and fungal pathogens is essential for making decisions about their control. We encourage studies from all fields, including experimental studies and monitoring approaches to contribute to this Special Issue to promote knowledge and adaptation strategies for the assessment of health status and deterioration, preservation, and management of forest ecosystems.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
