Plant-Mediated Volatile Emissions upon Abiotic Stress in Forests: Relationships with Photosynthetic Traits

Message from the Guest Editors

In the 1960s, the observation of blue haze and tropospheric ozone pollution in many forested regions prompted plant scientists to think about plant emissions, and how these emissions influence the chemistry and dynamics of our atmosphere. These objectives and the relevant scientific studies led to the birth of the interdisciplinary research field of plant volatiles or biogenic volatile organic compounds (BVOC) in the biosphere–atmosphere component of the Earth system. Previously, plant physiologists speculated that certain volatile organic compounds released from plants primarily contributed to the formation of blue haze in the atmosphere. Since then, they went on to explore how individual and groups of plant volatiles influence the Earth's atmospheric chemistry and dynamics, and the relationship between plant BVOC emissions and photosynthesis. There is also a strong relationship between some BVOC emissions and photosynthesis. Besides strong constitutive BVOC emission from forest plant species, several abiotic stresses such as heat, drought, and cold stresses, substantially induce the emission of BVOCs from many forest species, previously categorized as non-emitters.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
