

## Special Issue

# Wood Drying and Other Heat Treatments of Wood

### Message from the Guest Editors

Wooden material must undergo a drying process to avoid dimensional changes and biological degradation. Moreover, during drying, the mechanical and technological properties of wood are enhanced. Therefore, wood drying processes represent a mandatory technological step in the entire chain of wood processing. Despite the progress achieved in the field of wood drying, including technical and automatic control systems, companies still face challenges regarding drying times, drying quality, energy consumption, and a lack of well-trained wood drying operators. Many topics have been studied through experiments and modeling techniques to better understand and optimize the wood drying process. However, further research is needed to align the drying process of wood with current requirements, specifically reducing energy consumption and increasing product quality. Thus, we encourage all researchers involved in wood drying to contribute to this Special Issue, which focuses on topics related to drying, such as water migration in wood, heat and mass transfer, stress development, airflow in kilns, drying schedules, drying quality, and controlling and monitoring the drying process.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
