

## Special Issue

# The Regulation Mechanism of the Formation of Important Characteristics in Woody Plants

### Message from the Guest Editors

Woody plants are crucial resources for human life and economic development. The formation of the important traits of woody plants is influenced by various factors, including genes, environment, and gene–environment interaction. Although the molecular mechanism of the formation of many important traits is still unclear, some scholars have studied the phenotypic observation, genetic analysis, and functional identification of different tree species, revealing the role of related genes in their formation. Therefore, this issue seeks research contributions on the formation of the unique characteristics of different woody plant organs, as well as on the formation of traits such as wood density, oil content, secondary metabolites, and other substance enrichment.

Potential topics include, but are not limited to:

The physiological regulation mechanism of the formation of important characteristics in woody plants;  
Mining genes related to the formation of important traits in trees and Study on the function of related genes;  
Regulatory network and prospect of research for the formation of the important characteristics of woody plants;

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
