## Environmental DNA as a Rapid Forest Biodiversity Inventory Tool

### Message from the Guest Editor

Forest ecosystems provide numerous services essential to human welfare such as fuel, building material, flood control, air and water purification and carbon sequestration. Forests are under increasing pressure due to anthropic activities, including urbanization, silviculture and intensive agriculture. Climate change and the introduction of pests and diseases are seriously threatening forest health. Forest functioning and ecosystem services are highly dependent on forest biodiversity. It is thus of paramount importance to accurately describe and monitor forest biodiversity to predict the impact of human activities on forest functions. Major constraint on traditional large-scale biodiversity inventories is the need to identify species using morphological characteristics and laborious and time-consuming techniques. It can also be difficult to identify the different stages of certain species and to detect rare and/or cryptic species. We welcome all studies aiming at studying forest ecosystems biodiversity using metabarcoding, to promote a more generalized usage of this promising technique and help the development of standardized protocols that are easily transferable across laboratories.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
