Analyses and Design of Fruit-Tree Based Agroforestry Systems

Message from the Guest Editors

Dear colleagues, Agroforestry is the simultaneous cultivation of trees and other crops/livestock on the same land. Fruit trees are high-value crops that represent the most used trees in agroforestry systems worldwide. There is a need for designing new fruit tree-based agroforestry systems that combine the best of both worlds, maintaining high yield and mechanization while reducing the need for external inputs and promoting biodiversity and ecosystem services, thus reducing economic and environmental costs. This can be achieved by exploiting the synergies between fruit trees and other crop/livestock species that can be combined with trees. With this Special Issue, we aim to gather details of current research that analyzes, or could aid, the design of fruit tree-based agroforestry systems, covering all aspects from analyses of current modern or remnant traditional systems to developments involving useful fundamental or applied knowledge, and from modeling to field experimentation. Results from other climates are also welcome.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the second half of 2024).
