Using Genomic Information in Forest Tree Breeding, Restoration, and Conservation: Separating Hype from Reality

Message from the Guest Editors

Large-scale genomic information has already changed forest genetics, and new approaches are on the horizon. However, rapid advances have widened the gulf between researchers and the users of genomic information. We aim to review the latest research on forest tree genomics and facilitate dialog among researchers and expert practitioners. We seek review articles, short perspective papers, and contributions describing original research and applications of structural, functional, evolutionary/comparative, quantitative/population, and ecological/landscape genomics in forest trees. Research on non-forest species is encouraged, if implications for forest trees are clear. Our goal is to ‘connect-the-dots’ between genomic research and application. Thus, your paper should include a discussion of the timeline and steps involved in translating genomic research into operational activities in ways that are clear to knowledgeable practitioners. We also encourage papers that describe downstream applications and priority needs for genomic information from a user’s perspective. Papers from breeders, conservationists, ecologists, and physiologists are particularly relevant.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
