

## Special Issue

# Assessment of the Health Status and Degradation Process of Forest Ecosystems

### Message from the Guest Editor

Forest stands are subject to more frequent and intense stresses and deterioration due to the combination of unfavourable climatic conditions and impact of harmful biotic factors, mostly insect pests and fungal pathogens. The monitoring of health status provides baseline data on the distribution, occurrence and harmfulness of biotic agents or abiotic factors. The assessment of harmful impact and spread of the most important insect pests and fungal pathogens is essential for making decisions about their control. Remote sensing has great potential for vegetation mapping in complex landscapes due to the ultra-high-resolution imagery acquired, especially in protected forest areas. They obtain information for the sizes of areas of deteriorated by biotic, abiotic and fire damages, health status of vegetation, observation the habitat in which pests and diseases are spreading out.

We encourage studies from all fields, including experimental studies and monitoring approaches to contribute to this Special Issue in order to promote knowledge and adaptation strategies for the assessment of health status and deterioration, preservation and management of forest ecosystems.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
