Essential Oil Composition of Forests Trees

Message from the Guest Editors

Essential oils are volatile compounds predominantly found in the leaves, wood, and fruits of coniferous trees and shrubs, and the composition and abundance of individual oil components vary across different plant parts. Terpenes (monoterpenes, sesquiterpenes, diterpenes, and triterpenes) dominate in essential oils, being the most abundant class of secondary metabolites, with plants containing over a hundred of them in varying concentrations. The terpene profile of certain species consists of a few dominant (abundant) components and numerous less abundant ones. According to current research, essential oils possess antiviral, antibacterial, antifungal, herbicidal, molluscicidal, nematocidal, and acaricidal properties, as well as toxicity towards insects and rodents. They also exhibit antioxidant, anti-inflammatory, analgesic, immunomodulatory, cytotoxic, antigenotoxic, and other properties. The literature on the composition of essential oils is vast, but their biological activity and applications in industry and agriculture have yet to be extensively studied.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
