Special Issue

Forest Growth Modeling in Different Ecological Conditions

Message from the Guest Editors

The global climate change the world is currently suffering means that forests have a more relevant role than ever. Whether they are restoration forests, new plantations, even aged or complex forests, all are effective tools to mitigate climate change by slowing CO2 accumulation in the atmosphere. Therefore, developing growth models adapted to new and future climate change situations is extremely necessary to manage these stands as best as possible, considering all possible functions and actors that belong to them and conserving them, including the different ecosystem services they provide. Talking about forest growth models means predicting the future status of a forest and the nature of any harvest from that forest and helping consider alternative management options. For these reasons, the main aim of this Special Issue is to compile papers that focus on forest growth and yield modeling at the individual tree or stand level, specific or generalized models, with different approaches, to improve knowledge and cover various forest types worldwide.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa
Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

Author Benefits

High Visibility:
indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:
JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
