# Impacts of Non-native Trees: Basic and Applied Aspects

### Message from the Guest Editor

Non-native trees have been widely planted worldwide to provide a wide variety of ecosystem services, ranging from natural resources (e.g., timber, tannins, or cork) to amenities or ornamental values. However, some of these species may have undesired effects in the introduced ecosystems. Moreover, some of these impacts may involve important economic losses or direct harms on people. Although impacts are often associated with invasive species, some of them may appear at low densities. Predicting impacts by non-native trees is challenged by the strong context-dependency of impacts, by the scarce information on the impact-abundance relations, by the biased selection of a few high-impact trees for scientific studies, or by the time lags that may hide the invasive potential.

We encourage studies from different fields, providing empirical information on the impacts of non-native trees on the structure and function of ecosystems or their components, as well as on ecosystem services. We also encourage studies contributing to improved risk assessment and the efficient management of non-native trees. Original studies and reviews are both welcome.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
