Physical–Mechanical Characteristic Analysis of Wood and Wood-Based Composites

Message from the Guest Editors

In the current age of global warming, the rational use of sustainable materials is more important than ever, and wood is, in certain cases, an ideal example of a sustainable material. However, the anisotropic properties of wood, which, in some cases, can be described as orthotropic, often complicate the use of wood for various purposes as well as its mechanical processing. In addition, new wood modifications are being developed to improve certain properties, but, unfortunately, these can have unwanted additional effects. The aim of this Special Issue is to stimulate additional research publications on the physical and mechanical properties of wood, focusing on modern wood processing, treatment and testing methods, and the analysis of the data obtained, such as using the principles of the design of experiments, artificial neural networks, the finite element method, etc. High-quality contributions are expected, covering a variety of topics on the physical, chemical, and mechanical properties, such as classical static and dynamic elastomechanical properties as well as strength and fracture properties, of both natural and modified solid wood and wood-based composites.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
