## Plant–Soil Interactions in Karst Regions

### Message from the Guest Editors

Karst regions have a shallow soil layer, discontinuous soil cover, high rock exposure rate, calcium-rich and alkaline soil. Karst plants have a clear adaptability to special and abundant niches and their configuration patterns in this region are very important for revealing the mechanism of community succession and formulating specific ecological management. At present, there are many studies on the water deficit stress of karst plants, ranging from the molecular to the community level. Future studies should further combine plant life forms and ecological species groups for community succession, and pay attention to the water adaptability of economic plants and the effects of frequent, extreme drought events on plants. In addition, mineral nutrients are likely to limit the restoration of vegetation in karst regions. We encourage studies from all fields, including mineral nutrition, plant–water relations, symbiotic and pathogenic plant–microbe interactions, and root traits for contributions to this Special Issue, in order to promote knowledge of, and adaptation strategies for, the restoration of vegetation in karst regions.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
