# Remotely-Sensed Phenology of Forests under Changing Climate Conditions

### Message from the Guest Editors

Remotely-sensed phenology is defined as the seasonal pattern of variation of vegetation indices in vegetated land surfaces observed from satellite remote sensing. The length of the time series, high temporal frequency, internal consistency, and continuous availability of the satellite measurements are fundamental requirements when dealing with ecosystem responses to climate change dynamics.

This Special Issue of *Forests* is focused on quantifying and modeling remotely sensed phenology under climate change conditions through novel methodological approaches. We particularly welcome studies that aim to answer the main questions connected to the changing climate by exploiting remote sensing potentialities, namely: How have the patterns of phenology shifted within different ecological zones over the last decades? What are the key factors affecting vegetation growing season change in recent years? How do the increased intensity and frequency of climate-induced stresses affect forests structure, distribution, and composition, with consequent changes in biomass production? What are the forests' adaptive responses to changing climate conditions?

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
