# Special Issue

# Impacts of Complex Forest Structures on Tree Regeneration

### Message from the Guest Editor

Variability in forest structures results in changes in understory light environments, moisture and nutrient availability, and temperature. Each of these abiotic factors influences the success of tree regeneration, both in density and species composition. Understanding the dynamics of seedling establishment and growth in relation to overstory structure is an important first step in the management of these complex forest structures. This Special Issue of *Forests* is focused on the effect that complex forest structure has on the establishment and growth of tree regeneration. Research articles should focus on the establishment and/or growth of tree seedlings in response to natural or anthropogenic disturbances that create forests with horizontal and vertical complexity. Studies that describe silvicultural techniques to facilitate tree regeneration in uneven-aged systems and/or quantify the abiotic conditions created by complex forest structure and describe the mechanisms related to successful regeneration are encouraged.

# About the Journal

## Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

## Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa
Department of Mathematics and Physics, Catholic University of Brescia, I-25121 Brescia, Italy

## Author Benefits

**High Visibility:**

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

**Journal Rank:**

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

**Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
