

Special Issue

Health and Fitness of Amenity Trees in Urban Landscapes

Message from the Guest Editor

The health of forest trees planted in our cities is dependent on the species' ability to adjust to its environment, and on the scientific knowledge of the heterogeneous community of tree technicians involved, from design to late-stage management. For instance, infected but still asymptomatic nursery stocks are known to vector harmful pests and parasites, quickly spreading without competition. Inadequate availability of water, nutrients and symbionts predispose trees to decline, increasing their susceptibility to root rotters and compromising trees' stability. This Special Issue of *Forests* will be a scientific compendium on the health of amenity trees in urban landscapes, with particular emphasis on trees and soil ecology, mutualistic and endophytic relationships, native and alien pests and paratites, diagnostics, epidemiology, IPM, genetic selection, monitoring, statistics and forecasting models, biosecurity, pest risk assessment and management, and tree stability. Studies dealing with both nursery and tree care practices on the ability of amenity trees to sustain stressful conditions are also welcome.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
