Microorganisms in Peat Swamp Forests: Abundance, Diversity, Function, Activity

Message from the Guest Editors

Peat swamp forests are swamps at the “forest” stage of their development. Swamps have their own role in the formation of the gas composition of the atmosphere, regulate the circulation of water, carbon and other natural components, and contribute to preserving biodiversity, including microbial biodiversity. Peat deposit is a bank of microorganisms, representing a wide variety of groups. Even though microbial communities of various swamps have been analyzed for more than a century, there are still many questions to be answered. Particularly important are the following ones: what groups and taxa of microorganisms prevail in swamps of different genesis and what ecological functions are they able to perform? The topic of this Special Issue is the assessment of abundance, diversity, viability, and activity of microbial complexes in the phyllosphere, rhizosphere, and litter and soils of peat swamp forests. Particular attention will be paid to studies where microbial complexes are analyzed via molecular–biological methods, as well as to the search for microorganisms with high functional and antagonistic potential.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
