

## Special Issue

# Carbon and Nutrient Accumulation and Decomposition in Forests

### Message from the Guest Editors

Carbon and nutrient accumulation (stocks) by forest stands play a significant role in assessing the potential impacts of sustainable forest management and biogeochemical cycles in forest ecosystems. The quantitative evaluation of these stocks in forest stands is important because of the role of carbon sequestration in mitigating global climate change and supporting sustainable forest productivity. Estimates of carbon and nutrient stocks in forest stands can be made at global, national, regional, landscape, and stand scales. For example, the role of such stocks in forest stands is likely to vary on a stand scale because the nutrient conversion rates and carbon allocation mechanisms differ between tree species. Other factors, such as tree biomass, site conditions, and forest management practices, can result in variations in carbon and nutrient stocks on a temporal and spatial scale. This Special Issue deals with these processes based on field experiments, modeling, reviews, and highlights emerging technologies to evaluate carbon and nutrient accumulation, both aboveground and belowground, in forest stands. Studies focused on organic matter inputs and decomposition are also welcome.

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
