Using Forest Management to Achieve Wildlife Conservation on Production Forest Landscapes

Message from the Guest Editors

Formal treatment of the forestry–wildlife topic generally dates to the late 1980s and early 1990s, initiated by intense criticism of practices used to manage public forests worldwide, the evolution of ecosystem management as a philosophy, increased regulatory attention to forest-dependent species, and the publication of seminal works on the topic of holistic forest planning. The mid 1990s and early 2000s corresponded to significant changes in how forested landscapes were used, with production demand being met by private land. This pattern holds today in most countries (with the notable exception of Canada). Part of this shift included intensification of silviculture, with greater emphasis on plantation-style and shorter-rotation forestry. These conditions have substantial implications for wildlife conservation, and perhaps now more than ever provide an opportunity to integrate silvicultural, harvest prescription, and wildlife management activities.

We solicit papers based on field research or literature reviews demonstrating how forest management practices affect wildlife, focusing on applied outcomes relevant to major timber-producing regions of the world.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.8 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
