Defense Mechanisms of Forest Trees against Fungi

Message from the Guest Editors

Forest ecosystems comprise multiple fungal species with diversified ecological roles, particularly distinguished for causing forest tree diseases. The immanent changes to the climate are further threatening forest ecosystems, since the phytopathogen distribution and severity of fungal diseases are increasing, and the rate at which endophytes switch from mutualistic to pathogenic behavior is changing. To defend this, plants are able to build elaborate constitutive and inducible defense mechanisms. However, the resistance mechanisms are not always the same as those described in plant models and new information is required to understand forest tree defenses and strategies. We encourage studies from all fields related to the defense mechanisms of forest trees against fungal pathogens, especially those providing new information about constitutive and inducible defense mechanisms, the distribution and severity of fungal pathogens and control mechanisms, as well as management strategies for controlling fungal diseases. Both original works and reviews are welcome, in particular, if they promote knowledge and new strategies for the preservation and management of healthy forest ecosystems.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
