## Mycorrhizal Fungi of Forests

### Message from the Guest Editors

Mycorrhizae play a key role in the nutrient and carbon dynamics of forests. Almost all known forms of mycorrhizae can be found in forests, but they are dominated by the ecto, ericoid, and arbuscular mycorrhizal forms. The diversity and function of mycorrhizae in forests has become a topic of increasing interest, especially in relation to carbon cycling and nutrient uptake. However, much of this information is confined to boreal forests. In the face of climate change, many environmental factors, such as increasing atmospheric CO<sub>2</sub> and drought, have been shown to influence the species assemblages and functions of mycorrhizae in forests. This issue focuses on the biodiversity and function of mycorrhizae in forests around the world. Prof. Dr. Douglas L. Godbold

## About the Journal

### Message from the Editor-in-Chief

*Forests* (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

#### Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
