

Special Issue

Modelling and Managing the Dynamics of Pine Forests

Message from the Guest Editors

Pine forests are widely represented around the world, and play important ecological and economic roles. Climate change might affect pine forest dynamics and the management of these forests. Additionally, changing policies and the diversification of primary uses (sawmill, pellets, panels, pulp and paper, among others) lead to different silvicultural regimes. With this Special Issue, researchers are invited to present the results of their studies on the dynamics of pine forests (regeneration, growth, and mortality), on statistical models which describe those dynamics, or on the silvicultural guidelines for distinct management purposes (timber, biomass, energy, carbon). The submitted papers can focus on factors which influence the natural regeneration process failures such as water stress, soil degradation after fire, and site factors. Papers about the dynamics of seedling growth, tree or stand development, or mortality associated with tree competition or driven by external factors are also welcome. This special issue is sponsored by IUFRO research unit 1.01.10 - Ecology and silviculture of pine. Dr. Teresa Fonseca

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
