Tree Growth in Limiting Environments

Message from the Guest Editors

Tree growth can be used as a proxy of tree performance under particular conditions and as an overall response to the supply of the main resources (light, water, and nutrients) and to the regulatory effect of different environmental variables. In this sense, the dating and studying annual tree rings through dendrochronology has been successfully used for climatic reconstructions, allowing for the detection of impacts of climatic extremes, such as droughts or frosts. Therefore, the study of secondary or radial tree growth, from the simple recording of the > ring width sequence, as well as deeper anatomical studies of intra-annual variables, can contribute to a better understanding of the relationships between overall tree performance and limitations imposed by the environment. We invite colleagues willing to contribute their research on tree growth responses to limiting environmental conditions, including drought or cold stress, and other climatic extreme events, as well as other environmental influences negatively affecting growth capability, to consider submitting an article for publication.

About the Journal

Message from the Editor-in-Chief

Forests (ISSN 1999-4907) is an international and cross-disciplinary, scholarly forestry journal. The distinguished editorial board and refereeing process ensures the highest degree of scientific rigor and review of all published articles. Original research articles and timely reviews are released online, with unlimited free access. Our goal is to have *Forests* be recognized as one of the foremost publication outlets for high quality, leading edge research in this broad and diverse field. We therefore invite you to be one of our authors, and in doing so share your important research findings with the global forestry community.

Editor-in-Chief

Prof. Dr. Giacomo Alessandro Gerosa

Department of Mathematics and Physics, Catholic University of Brescia,
I-25121 Brescia, Italy

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, PubAg, AGRIS, PaperChem, and other databases.

Journal Rank:

JCR - Q2 (Forestry) / CiteScore - Q1 (Forestry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.1 days after submission; acceptance to publication is undertaken in 2.4 days (median values for papers published in this journal in the first half of 2025).
