

## Special Issue

# New Trends on Fixed Point Theory

### Message from the Guest Editors

The fixed point theory occupies an important place in the nonlinear functional analysis, numerical mathematics, economics as well as in applied sciences. This Special Issue is dedicated to the modern theory of a fixed point from two aspects: metric and topological. Additionally, we expect applications in fractional differential equations, fractional differential inclusions, fractional boundary value problems and fractional operators. In this Special Issue, we hope to publish papers showing aspects of the application of topological methods in the fixed point theory, focusing primarily on Schauder-type theorems for single-valued mappings. The final goal is to publish novel results concerning multivalued mappings (Kakutani-type theorems). This primarily refers to applications in mathematical economics (the existence of a maximal element and the equilibrium problem).

## About the Journal

### Message from the Editor-in-Chief

*Fractal and Fractional* (*Fractal Fract.*) is a scholarly online journal which provides a forum for discussion on new original models and methods in fractals and fractional calculus both from theory and applications. It is a peer-reviewed, open access journal that publishes high quality original research articles, review papers and short communications.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Inspec, and other databases.

#### Journal Rank:

JCR - Q1 (Mathematics, Interdisciplinary Applications) /  
CiteScore - Q1 (Analysis)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.9 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
