Deadline for manuscript
submissions:

closed (1 April 2024)

Message from the Guest Editor

This Special Issue is encouraging researchers to address the technological advancements that have led to the development of novel approaches in the production of novel energy molecules and advanced renewable drop-in fuels. We are looking for contributions in the following areas: energy molecules for future heavy-duty transport, and advanced bio-, thermo-, and electro-chemical methods for the development of energy-carrying molecules, artificial intelligence and machine learning in novel fuel production processes, life cycle analysis, sustainability, and distribution of new energy-carrying molecules for heavy-duty transport.
