Deadline for manuscript
submissions:

closed (30 November 2009)

Message from the Guest Editor

The term 'mashup' refers to Web sites or services that weave data from different sources into a new data source or service. Mashups are becoming increasingly widespread, e.g., in the context of combining geographic and geo-tagged data about health-related issues or some disease and displaying such integrated data on Web maps.

Maged N. Kamel Boulos, Ph.D.

Message from the Editor-in-Chief

Future Internet is a fast-growing journal devoted to rapid publications of the latest results in the general areas of computer networking/communications and information systems, with a focus on the Internet of Things, big data and augmented intelligence, smart systems (in terms of technologies, architectures, and applications), network virtualization, edge/fog computing, and cybersecurity. Both theoretical and experimental papers are welcome. Every year, *Future Internet* also features Special Issues dedicated to specific topics within the journal's scope.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), Ei Compendex, dblp, Inspec, and other databases.

Journal Rank: CiteScore - Q1 (*Computer Networks and Communications*)
