

# Special Issue

## Mobile Health Technology

### Message from the Guest Editor

Use of mobile technologies in healthcare has rapidly expanded. The ubiquitous nature of mobile health (mHealth) technologies brings convenience to everyday lives and creates opportunities to deliver health interventions in a portable format with enhanced privacy and increasing accessibility to health interventions. Evidence has grown supporting the potential of mHealth technologies to be a useful delivery mode of health information by facilitating the dissemination of evidence-based health information quickly and broadly, and the efficacy of mHealth technologies for the management of chronic diseases in real world. The aim of the Special Issue is to report on the current evidence of the efficacy of mHealth technologies to promote health outcomes and/or the usability and user perceptions of mHealth technologies.

## About the Journal

### Message from the Editor-in-Chief

*Future Internet* is a fast-growing journal devoted to rapid publications of the latest results in the general areas of computer networking/communications and information systems, with a focus on the Internet of Things, big data and augmented intelligence, smart systems (in terms of technologies, architectures, and applications), network virtualization, edge/fog computing, and cybersecurity. Both theoretical and experimental papers are welcome. Every year, *Future Internet* also features Special Issues dedicated to specific topics within the journal's scope.
