

Special Issue

The Power of Faraday Tomography

Message from the Guest Editors

We invite you to submit manuscripts for a Special Issue of *Galaxies* on “The Power of Faraday Tomography”. Magnetic fields play vital roles on all scales throughout the Universe, allowing the creation of stars and exoplanets, affecting the gas flows in the interstellar medium, forming galactic and AGN jet structures, and permeating the cosmic web such as galaxy clusters. Yet the origin of these cosmic magnets and the mechanisms of field amplification/ordering over the history of the Universe are still largely unsolved. Recent developments from new astronomical messengers, such as fast radio bursts (FRBs), in combination with new polarimetric radio surveys, are rapidly developing this field from a data-restricted niche into a diverse and rapidly-developing field. This Special Issue aims to review the current status and future prospects of the Faraday tomography method, by combining astronomical observations, numerical simulations, and astrophysical theories.

Guest Editors

Dr. Mami Machida

Dr. Marijke Haverkorn

Dr. Takuya Akahori

Dr. Jamie Farnes

Deadline for manuscript submissions

closed (1 November 2018)

About the Journal

Message from the Editorial Board

Galaxies provides an advanced forum for studies related to astronomy, astrophysics, and cosmology, including all of their subfields. Different formats, such as specialized research articles, reviews, communications and technical notes are welcomed. Manuscripts containing original and creative research proposals and ideas are especially appreciated.

We encourage scientists to publish their astronomical observations and theoretical results in as much detail as possible. There is no restriction on the paper length and full experimental and methodological details, as applicable, should be provided. All papers will be peer reviewed promptly. On behalf of the distinguished members of the editorial board, I extend my welcome to all researchers working on these subjects to contribute to *Galaxies*.

Editors-in-Chief

Dr. Margo Aller

Department of Astronomy, University of Michigan, Ann Arbor, MI 48109-1042, USA

Dr. Jose L. Gómez

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Astrophysics Data System, INSPIRE, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Astronomy and Astrophysics) / CiteScore - Q2 (Astronomy and Astrophysics)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.4 days after submission; acceptance to publication is undertaken in 4.8 days (median values for papers published in this journal in the first half of 2025).
