

Special Issue

Game-Theoretic Analysis of Network Security and Privacy

Message from the Guest Editor

Security and privacy settings can be naturally modeled as strategic interactions among defenders, who are concerned with protecting their systems, and attackers, who aspire to compromise the security or privacy of these systems. This Special Issue is devoted to the study of game-theoretic models of security and privacy on networks, where networks are viewed as general abstractions that can represent interaction and interdependence among devices and/or people. Of particular interest to this Special Issue are novel game-theoretic models in CPS/IoT security and privacy, game-theoretic reasoning in network analytics, game-theoretic approaches that aim to balance privacy and data utility, and approaches at the intersection of game theory and machine learning in security and privacy.

About the Journal

Message from the Editorial Board

Editors-in-Chief

Prof. Dr. Ulrich Berger

WU Vienna, Department of Economics, Welthandelsplatz 1, 1020 Wien,
Austria

Prof. Dr. Kjell Hausken

Faculty of Science and Technology, University of Stavanger, 4036
Stavanger, Norway

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science),
MathSciNet, zbMATH, RePEc, EconLit, EconBiz, and other
databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 35.8 days after
submission; acceptance to publication is undertaken in 6.7
days (median values for papers published in this journal in
the second half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review
reports receive vouchers entitling them to a discount on
the APC of their next publication in any MDPI journal, in
appreciation of the work done.
