Special Issue

Game Models for Cyber-Physical Infrastructures, 2nd Edition

Message from the Guest Editors

This special issue invites contributions from the intersection of game theory and cybersecurity, improving existing or proposing new approaches to establish a systemic view and protection of CIs against large-scale attackers. The work can comprise, but is not limited to, systematic identification of vulnerabilities and risks, control theory for the protection against cascading effects of damage events, heterogeneous game models to cover complex attack patterns like advanced persistent threats, models of bounded rationality to describe human error and protections against this, reallife case studies and lessons learned. In addition, we welcome work on the adversarial use of AI, trustworthy Al and strategic online learning, as well as multi-criteria strategic decision-making and mechanism design for security and useable security.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), MathSciNet, zbMATH, RePEc, EconLit, EconBiz, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 32.6 days after submission; acceptance to publication is undertaken in 6.9 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review reports receive vouchers entitling them to a discount on the APC of their next publication in any MDPI journal, in appreciation of the work done.
