

Special Issue

Weighted Majority Voting Games

Message from the Guest Editor

Dear colleagues, The study of weighted majority voting games is important in understanding decision making in collective bodies such as the IMF, the EU Council of Ministers, and parliaments with disciplined political parties. In some of these bodies, the entire distribution of weights is chosen by design, while in others, it is the result not of planning but of citizens voting in an election. This Special Issue of *Games* will gather research on theory and applications of weighted majority voting. Relevant topics include, but are not limited to: _ Government formation _ Power measures _ Specific classes of weighted majority games; enumeration _ Noncooperative models of bargaining in weighted majority games _ Cooperative solution concepts for weighted majority games _ Modelling of voting in the EU _ Optimal design of voting systems _ Experimental research on weighted majority voting

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science),
MathSciNet, zbMATH, RePEc, EconLit, EconBiz, and other
databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 35.8 days after
submission; acceptance to publication is undertaken in 6.7
days (median values for papers published in this journal in
the second half of 2025).

Recognition of Reviewers:

reviewers who provide timely, thorough peer-review
reports receive vouchers entitling them to a discount on
the APC of their next publication in any MDPI journal, in
appreciation of the work done.
