

## Special Issue

# Economic Behavior and Game Theory

### Message from the Guest Editor

During the last three decades, the dialogue between game theory and experimental economics has produced a positive feedback loop, promoting the advancement of both fields. This Special Issue of *Games* is meant to encourage this prolific exchange, including papers that can contribute both from a theoretical and an empirical point of view. We welcome submission of game-theoretic models aiming at capturing regularities that emerge from laboratory experiments, as well as experiments designed to test theoretical predictions, or to explore issues on which the theory is silent or ambiguous. The list of keywords included below identifies some of the suitable topics, but it is not exhaustive. To promote the verifiability and replicability of empirical results, experimental papers should include a power analysis, and all data should be made available upon publication.
