

## Special Issue

# Air Quality: Monitoring and Assessment

### Message from the Guest Editors

Monitoring and assessment of air quality and airborne emissions are of paramount importance today in a changing and increasingly polluted environment, as these tasks are fundamental in order to define control strategies, as well as evaluate the efficiency of actions taken, such as regulations and abatement programs. This Special Issue is intended to gather information on the most recent advances within this important field of knowledge, such as newer monitoring equipment and related techniques, case stories, interpretation of assessment methods, and integration into air pollution control strategies.
