Novelties in Diagnostics and Therapeutics in Hepatology: 2nd Edition

Message from the Guest Editors

Liver diseases are a globally recognized cause of morbidity and mortality. The burden of these diseases has rapidly changed over the last decade due to the introduction in clinical practice of new antiviral agents for hepatitis C virus. Therefore, hepatologists are now tackling the burden of other pathological entities, such as metabolic-associated and hematological-associated liver diseases. A multidimensional diagnostic work-up is needed to ensure the optimal management of these patients. Furthermore, novel techniques and drugs are under investigation for the treatment of advanced stages of liver disease that are complicated by portal hypertension and hepatocellular carcinoma. Within this Special Issue, we will summarize the most updated and cutting-edge research in these fields.

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Embase, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.8 days after submission; acceptance to publication is undertaken in 4.9 days (median values for papers published in this journal in the second half of 2025).
