

Special Issue

Management and Treatment of Digestive Disorders

Message from the Guest Editor

The goal of this Special Issue is to discuss the management and treatment of some of the most encountered gastrointestinal diseases. These are the bread and butter of gastroenterology, and every gastroenterologist should be proficient in them. Every day in clinical practice, we come across patients with GERD, PUD, cirrhosis, pancreatitis, biliary diseases, IBS, diverticular disease, and anorectal disorders. There have been enormous advances in technology and therapeutics. What we used to consider the standard of care 10 years ago has evolved. We hope with this Special Issue to shed the light on some of these advances to improve the practice of medicine and patients' clinical outcomes.

Guest Editor

Dr. Micheal Tadros
