Deadline for manuscript  
submissions:

**closed (31 March 2018)**

### Message from the Guest Editor

Dear Colleagues,

Gel is a typical state of matter that consists of a polymer network and a very large amount of solvent. Because of such structural characteristics, gel plays essential roles in many fields of science, such as physics, chemistry, and biology. Gel is also widely-used in the fields of medicine, food, separation and purification technologies. We are surrounded by many commodities that are made of gels, even in our daily lives. Nowadays, therefore, we gain a great deal of benefit from gel science.

The field of gel science was extensively cultivated by the late Professor Toyoch Tanaka (1946–2000) from the Massachusetts Institute of Technology. Professor Tanaka found the volume phase transition and the critical phenomena of gel, and he constructed almost all basic science of gel on his own. We, here, propose to Guest Edit this Special Issue, “Advancements in Gel Science”, in memory of Professor Toyoichi Tanaka, since we believe that it is worth a great deal to gel science to summarize the advances made on the basis of his great contributions.

## Message from the Editor-in-Chief

*Ge/s* (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

## Author Benefits

**Open Access:**—free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High visibility:** Indexed by the [Science Citation Index Expanded](#) (Web of Science), [PubMed](#), Scopus and other databases.

**Rapid Publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 28.7 days after submission; acceptance to publication is undertaken in 3.1 days (median values for papers published in this journal in the first half of 2020).
