

Special Issue

Hydrogels for 3D Printing

Message from the Guest Editors

Hydrogels are 3D cross-linked networks of flexible polymer chains that contain a large amount of water as the filling solvent. 3D printing, as an emerging versatile manufacturing technology, has been applied in the fabrication of hydrogel constructs with complex structures and potential applications in tissue engineering, regenerative medicine, delivery systems (drugs, proteins, genes, cells), implantable devices, sensors, and diagnostic devices, among others. This Special Issue aims to present a collection showcasing the recent progress in hydrogels, including natural polymer hydrogels, synthetic polymer hydrogels, and derivative hydrogels to be used in extrusion printing, inkjet printing, laser or light processing printing, 3D bioprinting, and 4D printing. We encourage submissions covering key aspects of hydrogels, including synthesis and design, rheology, characterization, as well as application-focused research. As , we are inviting you to contribute a research paper or review on any topic related to this thread.

About the Journal

Message from the Editor-in-Chief

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editor-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
