

Special Issue

Advances in Composite Gels and Their Applications

Message from the Guest Editor

Hydrogels have been widely used in the fields of biological engineering, soft robots, flexible electronic devices and adhesives due to their good biocompatibility, stretchability and good water adsorption and retention. The strategy of composite hydrogels has been developed to endow a variety of properties due to their individual components. In particular, many advanced composite hydrogels with unique properties, such as self-healing, stimuli-responsive, excellent electrochemical properties as well as excellent mechanical properties, have been fabricated. Moreover, the applications of these composite gels include, but are not limited to, stimuli-responsive materials, water treatment materials, drug-release matrices, flexible supercapacitors and wearable electronics devices. The Special Issue “Advances in Composite Gels and Their Applications” focuses on recent studies including the design of bio-based composite gel, polymer-nanofiber composite gels, polymer-inorganic composite gels and their applications as self-healing, shape memory, water treatment and flexible electronic devices.

About the Journal

Message from the Editorial Board

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editors-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Prof. Dr. Chuanliang Feng

State Key Lab of Metal Matrix Composites, School of Materials Science and Engineering, Shanghai Jiao Tong University, Shanghai 200240, China

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
