

## Special Issue

# Electroactive Hydrogels: Application in Soft Actuators and Flexible Devices

### Message from the Guest Editors

Dynamic, electroactive hydrogels are stimuli-responsive materials at the forefront of innovation, driving advancements in wearable technologies, soft actuators, and flexible systems, including smart bioelectronic devices. Their unique ability to mimic biological tissues, respond to external stimuli, and combine remarkable biocompatibility with mechanical flexibility holds exceptional promise for applications ranging from biosensors and drug delivery systems to injectable bioelectronics and soft robotics. This Special Issue seeks to foster interdisciplinary dialogue and inspire transformative technologies at the intersection of materials science, biomedical engineering, and soft electronics. As , we invite researchers from diverse disciplines to contribute original research, reviews, or perspectives on topics related to dynamic, electroactive hydrogels and their applications.

## About the Journal

### Message from the Editorial Board

*Gels* (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

### Editors-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Prof. Dr. Chuanliang Feng

State Key Lab of Metal Matrix Composites, School of Materials Science and Engineering, Shanghai Jiao Tong University, Shanghai 200240, China

---

### Author Benefits

#### High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
