Rheological Studies and Applications of Hydrogels Related to Drug Delivery

Message from the Guest Editors

Hydrogels are well-known materials due to their excellent gel-forming properties, the number of publications devoted to which has grown exponentially in recent years. In the realm of drug delivery, rheological studies related to hydrogels have emerged as an essential area of investigation. The exploration of hydrogel formulations and their rheological characteristics constitutes a fundamental aspect of this Special Issue, delving into the behavior and mechanical attributes that investigate their functionality. Hydrogels, due to their unique structural characteristics and responsiveness to environmental stimuli, stand as versatile candidates for use as drug delivery systems. The rheological investigation of these materials often consider their viscoelastic properties, shear-thinning behavior, and gelation kinetics, providing insights into the dynamic interplay of forces governing hydrogel mechanics. This Special Issue's scope ranges from their fundamental aspects to particular applications. It will discuss the preparation, properties, and rheological characteristics of hydrogels, as well as their practical applications in drug delivery systems.

About the Journal

Message from the Editorial Board

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editors-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Prof. Dr. Chuanliang Feng

State Key Lab of Metal Matrix Composites, School of Materials Science and Engineering, Shanghai Jiao Tong University, Shanghai 200240, China

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
