Advanced Aerogels: From Design to Application (2nd Edition)

Message from the Guest Editor

Aerogels are a class of highly porous materials with unique properties such as low density, high surface area, and high thermal insulation. These materials have gained significant attention in various fields, including energy storage, environmental remediation, and aerospace, due to their exceptional properties. In recent years, significant advances have been made in the design and application of aerogels, leading to the development of advanced aerogel materials with enhanced properties and functionalities. Another important aspect of advancing aerogel technology is the development of novel composite materials that combine aerogels with other functional materials to create materials with enhanced properties. For example, aerogel composites with carbon nanotubes have been shown to exhibit superior mechanical strength and conductivity, making them ideal for applications in structural materials and electronics. Overall, advancements in aerogel technology have opened new possibilities for the design and application of these unique materials.

About the Journal

Message from the Editorial Board

Gels (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

Editors-in-Chief

Prof. Dr. Esmail Jabbari

Biomimetic Materials and Tissue Engineering Laboratory, Department of Chemical Engineering, University of South Carolina, Columbia, SC 29208, USA

Prof. Dr. Chuanliang Feng

State Key Lab of Metal Matrix Composites, School of Materials Science and Engineering, Shanghai Jiao Tong University, Shanghai 200240, China

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 13.5 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
