

## Special Issue

# Designing Nanogels for Drug Delivery Systems

### Message from the Guest Editors

The use of nanogels as versatile nanocarriers of active molecules has gained substantial interest considering that they are able to control the delivery. Nanogels are three-dimensional (3D) cross-linked gels presenting tunable porosity. Nanogels comprise various polymers of both natural and synthetic origin, and they can encapsulate protein, peptides, drugs, as well as diagnostic agents. Three main categories of nanogels have been identified as i. stimuli-responsive, ii. polymer-based, and iii. structure-based. Nanogels can avoid renal clearance, leading to a longer serum half-life due to their small particle size ranging from 20 to 250 nm; therefore, they can be applied as potent agents in various fields, i.e., drug delivery, tissue engineering, diagnosis, etc. This issue aims to illustrate the current progress and recent advancements of nanogels in drug delivery, tissue engineering, and the combination thereof. Research areas may include (but are not limited to) the following: polymeric nanogels, as well as stimuli-responsive nanogels for various therapeutic areas.

### Guest Editors

Dr. Neslihan Üstündağ Okur

Department of Pharmaceutical Technology, Faculty of Pharmacy,  
University of Health Sciences, Istanbul, Turkey

Dr. Panoraia I. Sifaka

Program of Pharmacy, Department of Life Sciences, School of  
Sciences, European University Cyprus, Nicosia, Cyprus

### Deadline for manuscript submissions

closed (21 August 2023)

## About the Journal

### Message from the Editor-in-Chief

*Gels* (ISSN 2310-2861) is recently established international, open access journal on physical and chemical gel-based materials. The journal aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. General topics include but not limited to synthesis, characterization and applications of new organogels, hydrogels and ionic gels made either from low molecular weight compounds or polymers, composite and hybrid materials where a metal is by some means incorporated into the gel network, and computational studies of these materials in order to provide a better understanding of gelation mechanism. We cordially invite you to consider publishing with us and contribute with your own grain of sand to the advance in this fascinating field.

### Author Benefits

#### High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, CAPus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q1 (Polymer Science) / CiteScore - Q1 (Organic Chemistry)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 12.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
